“Serum Vitamin D, Race, and Cardiovascular Disease Risk”

Presented by: Pamela L. Lutsey, PhD, MPH
McKnight Land-Grant (Assistant) Professor
Division of Epidemiology and Community Health
University of Minnesota, School of Public Health

Dr. Pamela Lutsey is a McKnight Land-Grant (Assistant) Professor within the UMN Division of Epidemiology and Community Health. She is a cardiovascular disease epidemiologist whose mission and passion is to identify potentially modifiable factors that influence cardiovascular disease risk, which could ultimately be cost-effectively intervened upon to reduce the burden of cardiovascular morbidity and mortality in our nation. She is particularly interested in the role of low serum vitamin D and sleep apnea on the risk of developing cardiovascular disease, and has active research in those domains.
